

Table of Contents

1 Effect of Micronaire on Oil Sorption Capacity of Three Different Types of Greige Cotton-Based Nonwoven Substrates

By Vinitkumar Singh, Texas Tech University; Paul Sawhney, Michael Reynolds, and Brian Condon, USDA SRRC-ARS; Ronald Kendall, Jr., Luke Kitten, Akshay Jain, Siva Parameswaran, Ronald J. Kendall, and Seshadri Ramkumar, Texas Tech University

Key Terms

Cotton, Micronaire, Nonwovens, Oil Sorption, Remediation

DOI: 10.14504/ajr.4.2.1

10 Qualitative Analysis of Tencel A100 Fiber and Selected Regenerated Cellulose Fibers

By Youjun Gao, Jinrui Liu, Sumin Zhao, and Xiangli Zhang, Hebei Entry-Exit Inspection and Quarantine Bureau

Key Terms

Formic Acid, Lyocell, Modal, Qualitative Analysis, Rayon, Regenerated Cellulose Fiber, Tencel, Viscose, Zinc Chloride

DOI: 10.14504/ajr.4.2.2

15 Quantitative Analysis Method for Tencel A100 and Viscose Fiber Mixtures

By Jinrui Liu, Youjun Gao, Xiangli Zhang, and Sumin Zhao, Hebei Entry-Exit Inspection and Quarantine Bureau

Key Terms

Formic Acid, Lyocell, Quantitative Analysis, Regenerated Cellulose Fiber, Tencel, Viscose, Zinc Chloride

DOI: 10.14504/ajr.4.2.3

20 Effect of Low Temperature Plasma Treatment on the Dyeability of Regenerated Bamboo/Cotton Blended Fabrics

By C. W. Kan and P. S. Lam, The Hong Kong Polytechnic University

Key Terms

Blended Fabric, Cotton, Dyeing, Plasma Treatment, Reactive Dyes, Regenerated Bamboo Fiber, Viscose

DOI: 10.14504/ajr.4.2.4
