Pollution Abatement Engineers

From Tenter Frames • Tumble Dryers
Printing Dry Boxes • Heat Setting
Dyeing & Finishing • Carpet Sizing
Vinyl Calendering • Texturizing
Plasticizer Coating

Solution
Low initial and operating costs — 2 cents per hour per 10,000 CFM
Guaranteed to meet pollution codes
Eliminates visible and odorous emissions
Automatic Self-cleaning systems
Recovers oil & plasticizer
Light and compact units enable easy mounting on roof or in existing exhaust system

[Continued on page 78]
Michael J. Koroskys, a vice president and senior management member of The Wool Bureau, Inc., U.S. division of the International Wool Secretariat, died Dec. 20. He was 53 years old. At the time of his death, Koroskys was head of the product development and technical services division of the Wool Bureau. He joined the Wool Bureau in 1967 after ten years as technical engineer and marketing specialist for the textile division of Monsanto Co. Previous to that, he was assistant professor in the wool section at Lowell Technological Institute and served as both a consultant and in managerial capacities with firms in textile and allied industries.

Gil Roseman has been promoted to manager, dyeing and finishing, for Inwood Knitting Mills, Inc., a textile unit of National Distillers and Chemical Corporation. Inwood’s dyeing and finishing operations are carried out at its Clifton, N.J., plant. Roseman has been manager of dyeing for Inwood for three years, and formerly was superintendent of dyeing for Springs Mills Knit Division, Monroe, N.C.

Howard P. Oldfield retired Dec. 1 as cloth manufacturing manager of Worcester Textile Co., Centerdale, R.I. A testimonial in his honor was held by his associates. After graduating from Burdett College and Boston and Lowell Technological Institute, Oldfield served as apprentice at the American Woolen Company in Andover and Lawrence, Mass. He was later associated with the Ayer Mills in Lawrence, Globe Mills in Utica, N.Y., Wood Mills in Lawrence, International Mills in Methuen and Dunn Worsted Mill in Woonsocket, R.I. before coming to Worcester Textile in 1952.

Edward M. Traub, Jr. has been appointed sales manager of A. Gross & Co., Newark, N.J.

REVERSIBLE
High Speed Homogenizer
For Printing, Dyes and Finishes

1) Reversibility forces instantaneous wet out of gums or dyes in the downward mode of operation.
2) Homogenizing, in the upward mode, insures complete dispersion of gums and the elimination of fish eyes or the fine dispersion of difficult to disperse dyes to eliminate settling, specking or streaking.
3) Homogenizers from 1 to 10,000 gallon tanks.
